

Brief

The power of HP and SAP HANA sized right for your business

HP Flex-Bundles Small and Medium Enterprise for SAP HANA

Big Data is not just an issue for big enterprises. HP Flex-Bundles Small and Medium Enterprise (SME) for SAP HANA provides instant operational insight so you can respond nimbly to changing business conditions.

Better, faster decision making

Thanks to faster reporting, enterprise search, and access to more data than ever before

Simplified IT

Complete, certified solutions to optimize your performance and improve your uptime

Higher return on investment

Reduced hardware and maintenance costs with a simplified landscape powered by HP and SAP

Data explosion = big headaches

When opportunities arise, you need the ability to make decisions with zero delay. And while the emergence of Big Data means you have more information than ever to work from, all that data can actually slow down decision making and make things tough on IT.

Just like a large enterprise, you need a real-time software platform that gives you faster access to the wealth of insight that lies within your operational and strategic information. But because you don't have the same resources as a large enterprise, you also need to keep it simple.

Introducing HP Flex-Bundles SME for SAP HANA

SAP HANA is a real-time in-memory analytics platform that gives you fast access to operational and strategic information. It offers a simplified IT landscape while combining data from multiple sources, significantly improving processing speeds, and supporting powerful text and data mining modeling abilities.

HP Flex-Bundles SME for SAP HANA is designed with your needs in mind. These solutions bring together the powerful capabilities of SAP HANA with the powerful simplicity of HP ProLiant Gen8 server technology.

And it comes in three solution configurations so you can find the one that's just your size.

Everything you need, in a sized-right package

No matter where you are in your business, HP and SAP have a solution that's sized right for where you are today—and where you'll want to go tomorrow.

Depending on your situation and goals, your HP reseller will help you select between two SAP HANA offerings.

Our solution partner

SAP Business One, version for SAP HANA

This product offers you the option to use SAP HANA as the database for your complete SAP Business One solution. It is a full-featured solution that offers all the business management capabilities of SAP Business One, but also includes SAP Business One, analytics powered by SAP HANA, so you will be able to take advantage of the advanced analytics and reporting capabilities of SAP HANA.

SAP Business One, analytics powered by SAP HANA

This product runs beside your existing SAP Business One system and offers a standalone platform. It features integrated productivity tools including predefined multi-dimensional data sources and dashboards, and reports and enterprise search capabilities to locate important data within your SAP Business One system.

Solutions run on HP ProLiant ML350p Gen8 Servers

HP Flex-Bundles SME for SAP HANA includes certified hardware for SAP HANA, based on the HP ProLiant ML350p Gen8 Server. HP ProLiant Gen8 servers are the first to use built-in intelligence to continuously analyze thousands of system parameters to deliver automation across the lifecycle of the data center, optimize application performance, and proactively improve uptime.

HP Flex-Bundles SME for SAP HANA provides a complete, certified hardware platform for the SAP Business One solution you choose. Your certified HP reseller will recommend the size for your solution based on your business needs.

Starting out

Up to 32 GB compressed data 64 GB

Building momentum

Up to 64 GB compressed data 128 GB

Business expansion

Up to 128 GB compressed data 256 GB

Together HP and SAP help you accelerate your business with simple solutions that are predefined and validated, yet flexible so you can choose a solution that meets your needs today and is ready to grow with you tomorrow.
